The first Photoshop: The original version of PhotoShop was a \$899 (actually \$999.70) program developed by four people from Microsoft on a Mac. And to make a long story short, the software didn't last long. For roughly four years, Adobe updated Macs twice a year with a new version of Photoshop. Sometimes that made good business sense, but mostly it was because Windows was the only computer OS. But in 1997, Apple released its revolutionary Newton PDA. That helped to change things forever. After the Macintosh success, a revised Photoshop package was released in the PC world. It featured all the same features as the original version and came out for just \$79 (roughly \$100), making it cost effective for a broad audience. This was the beginning of the end for Windows dominance, and in so many ways, Adobe Photoshop now stands as the poster child for the PC revolution. The software was called PhotoShop for Windows and the first version was released in 1995. The first version was a key component in Apple's \$2 billion purchase of the software firm. That said, using Photoshop on Windows is a bit of a challenge since PhotoShop introduced its new names every time a new version came out. For example, PhotoShop on Windows 1 didn't have the word Photoshop in its name. It was simply called SoftImage. So the Windows 2 version was SoftImage 3. Mac users had a bit more luck. This was because Apple had already introduced the original version of the Mac Plus and rebranded it as Photoshop 1. But PhotoShop 2 finally put the word Photoshop in its name, making the two versions future-proof. The version after that was simply called Photoshop.
